

Drying and disinfection solutions for construction companies and workers

Scan QR-code to learn more about the solutions

Working on construction sites is tough and demanding. Construction workers are exposed to extreme weather conditions like rain, snow, heat, or cold on a daily basis. Dirt and dust are everywhere, and the physical exertion is immense. These conditions also put a lot of strain on workwear, often leading to unpleasant odors and unhygienic conditions.

WINTERSTEIGER Dry & Protect's drying and disinfection systems offer an effective solution. Our systems ensure that workwear is quickly and reliably dried, bacteria, viruses, and fungal spores are killed, and unpleasant odors are neutralized. If needed, the clothing can also be warmed up to match the start of a shift or during breaks, which is especially beneficial in cold environments. This way, construction workers can be confident that their equipment is always in top condition, allowing them to fully focus on their work.

Benefits

Quick, gentle, and efficient drying

Disinfection and odor reduction with each cycle

Longer lifespan of high-quality equipment

Drying cabinets with Sterex plasma technology impress the city of Bad Schwalbach

The city of Bad Schwalbach in the southern Hessian Main-Taunus district has its own municipal forest areas, which are managed by its own employees. Due to the weather-dependent and physically demanding forestry work, the employees expressed a desire for a way to dry their workwear after work. They decided on drying cabinets with Sterex plasma technology.

«What we absolutely did not expect was the integrated disinfection option called Sterex. This 'miracle device' achieves real disinfection of viruses, bacteria, and all kinds of fungal spores during a drying time of about 3 hours – odors are completely eliminated not only in the clothing but also in shoes, gloves, and helmets. A renowned German hygiene institute has certified this technology. We are very pleased with the innovative disinfection option for our clothing,» said Mr. Disabato, a forestry worker for the city of Bad Schwalbach.
