

Drying and Disinfection Solutions for Gardening and Landscaping Businesses

Scan QR-code to learn more about our solutions.

Working as a gardener or landscaper often involves various and often challenging weather conditions. Wetness, dirt, and physically demanding tasks are constant companions that put a lot of strain on work clothes and equipment. This can not only lead to unpleasant odors and unhygienic conditions but also cause significant discomfort for the wearers, negatively impacting their health and well-being.

WINTERSTEIGER Dry & Protect's drying and disinfection solutions effectively address these challenges. Utilizing state-of-the-art plasma technology, work clothes and equipment are not only dried but also disinfected with each cycle, effectively neutralizing odors. Additionally, clothes can be warmed up prior to shifts or during breaks. This ensures that workers can start their workday every morning with dry, hygienic equipment with minimal effort.

Benefits

Fast, gentle, and efficient drying
Placement of all equipment on internally ventilated hangers and special nozzles

Disinfection and odor reduction with each application
Use of plasma technology instead of ozone – gentle on materials and safe for health

Longer lifespan of high-quality equipment
Less cleaning and washing saves time and resources

Drying Cabinets with Sterex Plasma Technology Surprise Bad Schwalbach

The city of Bad Schwalbach in the southern Hessian Main-Taunus district in Germany has its own municipal forest areas, which are managed by its own employees. Due to the weather-dependent and physically demanding forestry work, the employees expressed the desire for a way to dry their work clothes after work. They decided on drying cabinets with Sterex plasma technology.

«What we did not expect at all is the integrated disinfection option called Sterex. This 'miracle device' achieves real disinfection of viruses, bacteria, and all kinds of fungal spores during a drying time of about 3 hours - the odors are completely eliminated not only in the clothes but also in the shoes, gloves, and helmets. A renowned German hygiene institute has certified this technology. We are very happy about the innovative disinfection option for our clothes.» – Mr. Disabato, forestry worker of the city of Schwalbach
